

REFERRAL LETTER

Date: 04/22/2026 (fake)

Re: Patient Sam Synthetic-Kim, DOB 11/11/1965 (fake)

Patient referred for lumbar spine MRI for chronic low back pain.

Symptom onset date is unclear from prior records; patient reports 'a while now, maybe a couple months, hard to say.'

PHYSICIAN EXAM NOTE

Neurological exam: Strength testing limited by patient effort and pain behavior; results inconsistent between trials and not considered reliable. Sensory exam deferred - patient too uncomfortable to complete testing today. Reflex testing not performed this visit. Patient gives conflicting answers about bladder symptoms - first denies any issue, then later mentions 'maybe some trouble going, not sure.' Chart notes a history of cancer per old records, but patient states this is inaccurate and the notes may refer to a different patient.

TREATMENT NOTE

Patient mentions taking 'something over the counter sometimes' for the pain, name and dose not recorded. Physical therapy status unclear - patient believes a prior provider 'may have mentioned it' but no referral or session notes are on file.
